Spoken Cantonese *Fluent*

PROJECTS

Cycling App 01/2020

Instrumental in the development of a web based Vue.JS and PHP Laravel application that will be used by sales representatives in ClearVision to help keep track of their sales cycles. Solved the issue of sales representatives not having a clear and regular schedule to follow.

UniversaCare 01/2020

Developed a website for UniversaCare, a local home care agency. Employed Vue.JS to create a stylish and intuitive user interface. Used Firebase to deploy and provide basic functionality to website. Resulted in an increase of clients and recognition in the local community.

Twitter Clone (Course Project) 12/2019

Created a Cloud based application that acts and functions in the same manner as Twitter. It features a scaled-out server architecture using a NodeJS backend with Express, MongoDB, and jQuery frontend. It focuses on being to handle many different requests simultaneously.

COURSES

Cloud Computing 08/2019

Learned how to apply cloud technologies such as queues, load balancers, MongoDB clustering, Memcached, etc.

Cyber Security 08/2019

Enhanced coding abilities by following certain patterns to write safe code. Studied known vulnerabilities in systems in order to code against them.

Analysis of Algorithms 12/2018

Learned about Algorithm designs such as sorting methods, graphing algorithms, and dynamic programming.
